Notes

We got 2 large collapses as we approached the crown of the slide on Wade's world in Fisher Creek, and another an hour later near Henderson Mtn. On Henderson Bench we could see 2 new avalanches that looked fresh, possibly cornice triggered. It was not windy, so windloading was not the trigger. Regardless, it was disconcerting. Across the Fisher Creek valley we could see a slide on the nose of Sheep Mountain on the same slope that killed a snowmobiler in 2015. [Avalanche details in separate record].
