# Multiple large avalanches in Centennials and Lionhead 

CENTENNIAL RANGE<br>Lionhead Range<br>2/1/2019<br>Code<br>SS-N-R3-D2.5-O<br>Aspect Range<br>NE-SW<br>Latitude<br>44.53940<br>Longitude<br>-111.51300

Notes
From e-mail on 2/1/19: "The Reas Peak area had 7 slides that I could see from the bottom of the drainage, most of them looked to have occurred with the last storm and had a northerly influence to their aspect. The largest and most recent slide I included in the [above photo], Reas Peak is the highest peak on the left in the photo and the slide path is on a NE aspect. If you look close at the photo you can see a 2-3' crown on the far left side of the frame on the north aspect of Reas from another slide."

Another observer saw a large slide near Lionhead (photo) and one on Reas Peak from the same cycle.

[^0]Slab Thickness units
centimeters
Single / Multiple / Red Flag
Multiple Avalanches
Advisory Year
18-19

[^0]:    Multiple Avalanches
    Number of slides
    9
    Number caught
    0
    Number buried
    0
    Avalanche Type
    Soft slab avalanche
    Trigger
    Natural trigger
    R size
    3
    D size
    2.5

    Bed Surface
    O - Old snow
    Problem Type
    Persistent Weak Layer
