

whumpf under high load on south side of Taylor mountain.

Date

Tue, 01/03/2023 - 06:15

Activity

Snowmobiling

Had 7 sleds in a relatively small area on the south facing side of Taylor mountain at about 10k ft.

Group noticed a substantial wumph after sitting for less than a minute.

Don't believe it is cause for serious alarm as a snow pit showed relative stability. Just something we all noticed and talked about and to be aware of as the snow continues to fall.
