

Miller Mountain

Date

Sat, 02/25/2023 - 13:00

Activity

Skiing

On Saturday we toured up Sheep Creek and dug a pit on an SW aspect of Miller Mountain. We observed that the wind slab easily failed and propagated at this location. Shifting winds continued to load multiple aspects throughout the day. On the southwest ridge of Mineral Mountain we observed a large slide, approximately 200ft wide, that appeared to trigger another slide lower down on the slope.

Region

Cooke City

Location (from list)

Miller Mtn.

Observer Name

Erich Schreier
