Notes

From obs "We rode up Lulu Pass at 8AM on 3/11/23 and saw the debris from a large D2.5-3 avalanche on the SE face of Fisher Mtn. Similar [slide](#) path to the large avalanche on Fisher earlier this season."

From GNFAAC 3/12: "Today we rode north of Cooke City and looked at recent natural and Human-triggered avalanches. The [slide](#) on Fisher Mtn. was very large and appeared up to 10 feet deep. It had much more volume in the debris than the [slide](#) that was triggered on this same path in December."
