Large Natural Crown on N. Saddle of Electric Pk

Date
Sat, 03/18/2023 - 14:05
Activity
Skiing

Large avalanche crown across the east facing saddle off the north side of Electric Peak. Roughy around 10,500 ft, around 800 feet across the crown, looked to have broke around 1-2 feet deep and would guess it happened in the last few days. Lots of active wind loading happening.

Region
Southern Gallatin
Location (from list)
Electric Peak
Observer Name
Koby Gordon
