

deep slab on Elephant

Date

Thu, 03/23/2023 - 12:00

Activity

Skiing

Compiled from multiple observations-

One observed noted "Large avalanche in the Bunny Ears on Elephant Mtn. Best guess is HS-N-R3/4-D3-O."

Second observer noted: "Skiers left flank appears at a distance to be 8-10' and by the looks of the bed surface I'd guess this was on advanced facets on an early season (late Oct/early Nov) ice crust."

Third observed submitted photos of slide from above.

Region

Northern Gallatin

Location (from list)

Elephant Mountain

Observer Name

Multiple
