

Poor structure and natural wet loose in Hyalite

Date

Mon, 01/29/2024 - 02:35

Activity

Ice Climbing

Numerous collapses in any terrain with a non-wind effected snowpack over 70 cm. Recent warm weather leading to settlement of the upper pack and a much denser slab. 3x natural size 1 natural wet loose off palace butte in steep rocky terrain, which happened before noon. Below 8000 feet the snowpack was moist to the ground in the pm.

Region

Northern Gallatin

Location (from list)

Hyalite - main fork

Observer Name

Sam
